

Premium Sphagnum Peat Moss

Profile®
Harvested Media

PROFESSIONAL BLONDE FIBERS, LOW DENSITY, SUPERIOR DRAINAGE AND POROSITY

Trusted industry-leading Sunterra Canadian Sphagnum Peat Moss is now under the name ProfilePeat™. We continue to supply premium peat moss in both 64-cubic-foot bales along with 135-cubic-foot towers which translates into greater operational efficiency and savings for you.

Compare the Value on a 500,000-Cubic-Foot Order:

	BALES REQUIRED	PALLETS PER TRUCK	TRUCKLOADS REQUIRED
ProfilePeat 64-cubic-foot bale Lower bulk density 2:1 compression	3,906	44 on average	89
Alternative 55-cubic-foot bale Higher bulk density 2:1 compression	4,545	44 (usually less)	103

RESULT: 17 percent higher delivered volume per truck

ProfilePeat 135-cubic-foot tower Lower bulk density 2:1 compression	1,852	24 on average	77
Alternative 110-cubic-foot bale Higher bulk density 2:1 compression	2,273	24 (usually less)	95

RESULT: 23 percent higher delivered volume per truck

BENEFITS

Highly compressed material increases material handling efficiency and production throughput, reduces storage requirements and lowers the cost and carbon footprint of transportation.

We have received the prestigious Veriflora certification for responsibly harvested peat moss!

COMPARE THE QUALITY

ProfilePeat™ Canadian Sphagnum Peat Moss is blonde, long-fibered surface peat from freshly opened acreage in Manitoba and Saskatchewan. You'll find one of the highest percentages of pure sphagnum content in every bale you purchase. **It features consistent pH, low-soluble salts and high porosity, and is available in two grades:**

GROWER GRADE

The most popular grade of our professional peat moss line, Grower Grade has fibrous consistency that helps improve aeration and increases drainage to promote healthy root development. It is most popular in greenhouse annual production, nursery perennial production and mushroom production. It is also widely used in smaller pack/flat production to larger pot and hanging basket application.

FINE GRADE

This is a short-fiber peat moss which is screened carefully to remove any large material and is ideal when an intensely screened growing media is required. It is typically used in germination, vegetable transplant, golf course production, and is an ideal substrate to be used in smaller cellulose cells and propagation trays.
